

Securely Mobilize Lotus Domino: Email, Instant Messaging and Custom Lotus Applications

FEATURES AT-A-GLANCE

- Enable access to Lotus Domino email & PIM data.
- Provide mobile instant messaging for Lotus Sametime and more.
- Extend Lotus applications to mobile devices.
- Secure and manage mobile data and devices.
- Support a variety of mobile operating systems, including Windows Mobile, Symbian, RIM BlackBerry and Palm.

IBM's Lotus collaboration software helps people effectively share and manage information, make business decisions quickly, and streamline the way they work. Having those collaboration tools available from a mobile device or smart phone is key to bridging the gap between employees while traveling or away from the office.

Information Anywhere suite is a platform for mobilizing Lotus Domino and Sametime. It provides enterprises with mobile collaboration, applications, security and management functionality to empower a more productive, connected mobile workforce.

The Information Anywhere suite provides:

- **Mobile Email & PIM Data**

Information Anywhere provides a powerful solution for mobile delivery of Lotus Domino email and PIM (calendar, contacts, tasks) data to mobile workers any time, anywhere—regardless of the device or connection method. It currently supports more than 150 mobile devices built on the Windows Mobile, Symbian and Palm OS platforms.

- **Mobile Collaboration**

Information Anywhere provides enterprises with an easy to use, secure solution for extending Lotus Sametime and public instant messaging systems to a wide variety of mobile devices, including Windows Mobile, RIM BlackBerry, Symbian and Palm devices. It offers mobile workers a single application for accessing leading enterprise and public IM solutions from a range of mobile devices, enabling increased productivity with the ability to communicate and collaborate in real-time.

- **Mobile Enterprise Application Enablement**

Enterprises can extend custom Lotus applications directly to any mobile device. Information Anywhere provides the core integration, synchronization, messaging and mobile data management capabilities required to exchange information between frontline workers and enterprise systems, enabling better decision making, improved efficiency and increased profits.

- **Mobile Device Management & Security**

Information Anywhere allows companies to centrally manage and support multiple device types, applications, data and communications at the frontlines of business, regardless of the bandwidth available. It creates a bridge of system control, user support and information flow between the frontlines and the enterprise. The suite also uniquely combines management and security from a single console, providing the best protection against security threats and compliance issues. Information Anywhere addresses the spectrum of frontline security needs, including protecting against unauthorized access and other security vulnerabilities, wiping data and/or disabling access to lost or stolen devices, and encrypting data transmissions.

IBM Lotus Domino and Sametime features such as corporate email, address book, calendar, to do, journal, even custom Lotus Notes data and instant messaging are available to you securely and in real time. Sybase iAnywhere offers Information Anywhere suite that addresses the converging IT requirements of enterprises today.

- **Broad Mobile Device Support** – Sybase iAnywhere supports more than 150 of the industry's most popular mobile devices on all the major operating platforms including Symbian, Windows Mobile, Palm OS and OMA Data Sync clients. You choose the device or devices that work best for your enterprise, Sybase iAnywhere can support them.
- **End-to-End Security** – Remote access via a wide variety of devices makes data security ever more complex. Sybase iAnywhere ensures maximum security consistent with industry standards and offers the highest security for all data during transfer.
- **Administration Made Easy** – Administrators can quickly set up the server configuration for mobile data access as well as management and security functionality. Configurable settings for the device user, over-the-air deployment, and the ability to define user groups through existing Lotus Notes groups saves IT managers a considerable amount of time and minimizes mobile user involvement.
- **Seamless Synchronization** – Sybase iAnywhere is a “behind-the-firewall” enterprise solution. With the Live Connect feature, device users have ‘real-time’ access to business critical Lotus Notes information. Email, address book, calendar, journal, even custom Lotus Notes data is delivered to the user's mobile device.
- **End User Functionality** – A feature rich experience enables you to work efficiently and effectively from your mobile devices. allowing you to send and receive emails, view attachments such as Adobe Acrobat, accept and create calendar meetings and access a contact from your corporate address book.

ENTERPRISE IT

- **Email System**
 - Supports IBM Lotus Domino R5/R6/R7/R8 (including custom Notes database support)
- **Authentication**
 - Supports two-tier user authentication, allowing security administrators to fine tune network and groupware access.
 - Users can authenticate against Lotus Domino, Active Directory, SecureID, Radius, LDAP and databases.
- **Encryption**
 - Communications between the client and server are encrypted using a 128-bit AES along with 1024-bit RSA algorithm for the best combination of security and performance.
 - The encryption modules used – RSA Security BSAFE Crypto-C Micro Edition – are FIPS 140-2 Level 1 compliant.
- **Device Security**
 - Provides administrator-defined password policy, on-device encryption and data fading, among other security capabilities while allowing users to receive emails on an encrypted and locked device.
- **Device Management**
 - IT administrators have the tools to manage all the data transferred to mobile devices and the devices themselves, as well as controlling what can be accessed by mobile users.
- **Easy Installation and Deployment**
 - Client deployment features a Notes Address Book auto replication wizard.
 - The configuration file is packed in an executable format (exe) for over-the-air deployment.
- **Mobile Instant Messaging**
 - Provides mobile IM logging and routing capabilities that ensure compliance with corporate auditing policies.

ENTERPRISE USERS

- **Live Connect**
 - Provides real-time configuration to push out and receive the most up-to-date email, calendar, address book, to-do, journal, even custom Notes data and databases.
- **Email Highlights**
 - Write, send, receive, delete, sort, file and search email
 - Receive and view file attachments
 - View Adobe Acrobat files on all device platforms
 - Subscribe to Notes subfolders and view on your mobile device
 - Users can directly dial a phone number or compose and email from a phone number or email inside the text of an email
- **Calendar Highlights**
 - View calendar in day, week and month views
 - Accept and decline meeting requests
 - Full support for custom Notes repeating calendar entries and also support for exceptions to repeating calendar entries
- **Address Book Highlights**
 - Add, modify, delete and search contacts
 - Address book on mobile devices can contain both private and corporate Notes address book entries so that you can view all of your contacts in one location
 - iNotes integration for users with contacts stored in their Notes mail file
- **Corporate Directory Lookup**
 - Easily find a colleague's contact information within the corporate Notes address book without having to download the entire Notes address book.
 - Seamless integration within the email and contact applications for Windows® Mobile 5 mobile devices for easy use.
- **Mobile Device Support**
 - Supports more than 150 mobile devices including any handheld or smartphone using the following operating systems:
 - Symbian 6.0 and higher
 - Windows Mobile (Pocket PC, Pocket PC Phone Edition, and Smartphone)
- Palm OS 3.5 and higher
- OMA Data Sync (formerly SyncML) 1.0.1 and higher devices.
- **Connectivity Options**
 - Allows users to update their data anytime and anywhere via the following connection types:
 - GPRS/GSM
 - 1 XRTT/CDMA
 - 802.11 (WLAN)
 - Bluetooth
 - Infrared
 - Cradle/Cable
- **Mobile Instant Messaging**
 - Single client access to leading enterprise and public IM systems (such as IBM Lotus SameTime, Google Talk and Jabber).
 - Supports broadest range of mobile devices - Windows Mobile, Symbian, RIM Blackberry, Palm.

SUMMARY

Businesses around the world rely on Sybase iAnywhere's expertise as the largest independent mobile software provider. Information Anywhere suite is a cost-effective mobile platform that quickly, easily and securely mobilizes Lotus Domino and Sametime systems. Leverage your Lotus investment by extending access from a variety of mobile devices and smart phones to empower your employees with secure, managed mobile collaboration solutions.
