

# Secure Enterprise Email for Apple iPhone

## Feature Overview

### AT A GLANCE

- Enterprise email on iPhone devices
- Corporate and personal address book access
- Secure infrastructure

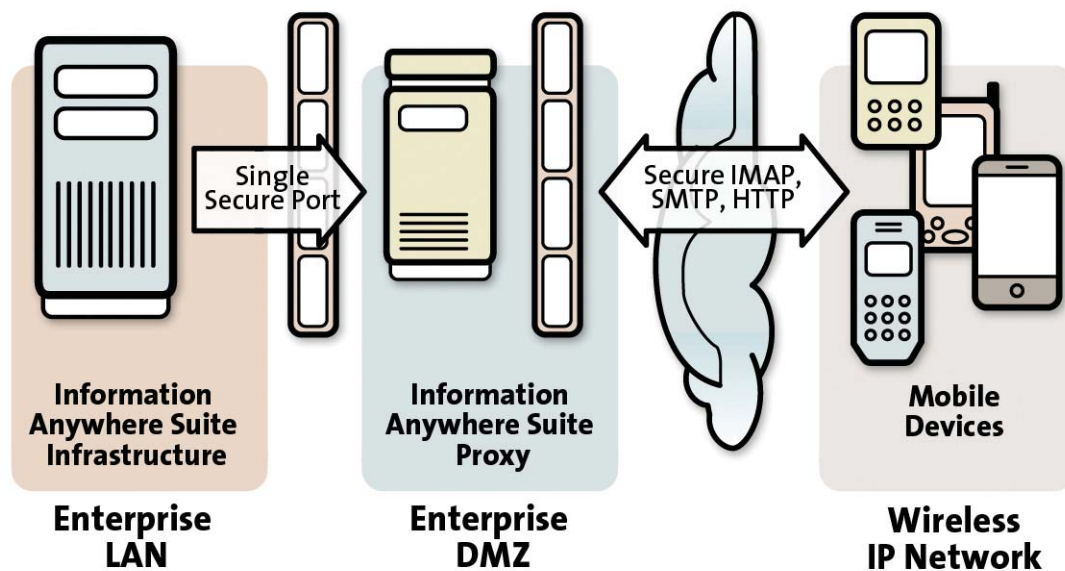

Information Anywhere Suite, through its OneBridge component, enables IT organizations to provide secure delivery of Lotus Domino and Microsoft Exchange enterprise email to iPhone users, in addition to a broad range of other mobile devices. Sybase iAnywhere's unique approach to providing enterprise email support for the iPhone reduces potential security concerns while still providing a rich user experience utilizing native iPhone applications.

Enterprises can provide access to email through the built-in email application available on the iPhone device. Users can also access corporate and personal address books through the Safari Browser. The new components used to specifically support iPhone devices integrate transparently into the existing mobile infrastructure.

### KEY FEATURES

- **Security:** Information Anywhere provides iPhone support without requiring changes to an enterprise's messaging infrastructure. The outbound connection model adds an additional layer of security. Enterprises no longer need to open inbound communication ports to the messaging infrastructure; all mobile device connections end within the enterprise DMZ. Information Anywhere adds specific features to equip IT with the ability to eliminate security risks with iPhone devices, such as restricting attachments, preventing user access and removing email data from a device. All of these features reduce potential security concerns with iPhone use in the enterprise.
- **Offline Email Access:** Information Anywhere supports the native iPhone client, which provides a feature-rich and faster user experience than found with browser-based email support. In addition, email is available for offline use.
- **Contact Data Access:** Information Anywhere provides secure access to contact data, including corporate directory and personal contacts.
- **Multi-device Support:** Information Anywhere addresses the demand corporations face to support a variety of mobile devices. Sybase iAnywhere now supports the iPhone, in addition to more than 250 Windows Mobile, Symbian and Palm-based devices.
- **Broad Enterprise Email Support:** Information Anywhere supports both Lotus Domino R6/7/8 and Microsoft Exchange 2000/2003/2007.
